

User Feature Feedback for URXperience

Created by The 4 codesmen

Objective:

This document highlights the features the team will implement over the course of the project, which was organized based on user feedback. Based on the feature priority of our customers, combined with the level of complexity each feature will require, we will use this data to organize which features to implement first.

The table below presents the data as a whole from the interviews and discussion we had with students, resident assistance, and resident manager. Priority is based on users priority and complexity is based on the implementation complexity of each feature/functionality.

North star customers: University Of Regina Resident **Students** (UR Residents)

Carryover customers: Residence Assistants/Manager (RA)

Features/Functionality List

- Login and Registration
- Chat System
- Complaint box
- Admin routes
